

# GrowthXP Neo

This module for GrowthXP, designed for integration with electronic health records, charts neonatal growth and bilirubin.

## Growth charts

- ✓ Height, weight and head circumference
- ✓ Monitor neonates born at different gestational ages (from 22 weeks), helpful in identifying children born small-for-dates
- ✓ Follow growth during the first few weeks of life

## Bilirubin charts

- ✓ Visualise bilirubin level based on total serum or transcutaneous values
- ✓ Shows phototherapy and exchange transfusion levels, auto-adjusting for gestational age, and phototherapy and timing of transfusion
- ✓ Hyperbilirubinaemia risk evaluation
